

David Varga

Junior Full-Stack Developer / AI Engineer

david.varga.1208@gmail.com

LinkedIn: [linkedin.com/in/david-varga-](https://www.linkedin.com/in/david-varga-) | **GitHub:** github.com/Davidva0812 | **Portfolio:** davidva0812.github.io

PROFESSIONAL SUMMARY

Innovative Junior Developer specializing in building modern web applications with a strong focus on **AI integration**, automated workflows, and full-stack data logic. Armed with an **Agile** corporate background, hands-on experience deploying **LLM**-powered systems (Llama 3, **RAG** architectures), and a solid frontend foundation (**React**, **TypeScript**). Proven track record of leveraging AI coding tools to accelerate development cycles and deliver production-ready software solutions.

SKILLS

- **AI & Data Science:** Prompt Engineering, RAG architectures, LLM Integration, Scikit-learn, Plotly, Matplotlib, NumPy, Pandas, Data Visualization
- **Languages & Markup:** Python, SQL, JavaScript (ES6+), TypeScript, HTML5, CSS3, JSON
- **Frameworks & Libraries:** FastAPI, React (Hooks, Router), Bootstrap, PyGame
- **Tools:** Git & GitHub, Node.js, npm, Joomla, WordPress, FileZilla, VS Code, PyCharm
- **Methodologies & Concepts:** AI Automation, Technical SEO, REST APIs, Unit Testing, Agile (Scrum), Responsive Design, Cloud & Cyber Security Basics
- **Languages:** Hungarian (Native), English (Upper-Intermediate – B2)

EXPERIENCE

Junior Software Developer | POMS Cloud Ltd.

October 2025 – Present | Remote

- **AI & Workflow Optimization:** Integrated Prompt Engineering and advanced AI tools (Gemini, Claude, ChatGPT) to accelerate code generation, automate repetitive enterprise tasks, and streamline data workflows.
- **Full-Stack & API Integration:** Developed backend logic and robust REST API connections using Python to ensure stable, real-time data flow between AI models and client-side interfaces.
- **Agile Collaboration:** Actively participated in high-velocity Agile sprint cycles and daily stand-ups, delivering intelligent web layout solutions and automated SEO deployment features.

KEY PROJECTS

- **Portfolio & AI Document Assistant (React, TypeScript, Python, FastAPI, Groq, Llama 3)**

AI Portfolio Assistant - System Behavior & Architecture Details

- ****Databases used****: This application uses ChromaDB as its local vector database for document embeddings, and Upstash Redis as a cloud database for storing chat history and maintaining session memory.

- ****API Protection****: The API is protected against overload by the Slowapi Rate Limiter, which strictly restricts users to a maximum of 5 requests per minute.

- ****Privacy Policy****: For security and privacy reasons, the chatbot is strictly forbidden from sharing David Varga's phone number or exact address. Contact must be initiated via email at david.varga.1208@gmail.com.

- ****Handling Non-Professional Queries****: If the chatbot receives a non-professional or off-topic question, its strict instruction is to politely decline to answer and steer the conversation back to David's CV, skills, and projects.

- **AI Chat Feature**: Developed near-instant inference using Groq LPU and Llama 3 for automated CV analysis, data extraction, and real-time streaming responses.
- **Frontend & Interactive UI**: Built a highly responsive React SPA featuring modular components, dynamic state management, and a custom UI chat-widget with real-time streaming responses (SSE).
- **Performance & SEO**: Optimized asset delivery, web accessibility, and technical SEO, achieving a 25% increase in Lighthouse performance scores while handling live, client-side PDF processing.

- **FinTech Order & Transaction Management System (FastAPI, SQLite, SQL):**

Developed an asynchronous backend for secure order processing. Implemented strict database-level **ACID transactions** with automatic rollback mechanisms for absolute data consistency, and leveraged advanced **SQL Window Functions** for financial data analytics.

- **Fantasy RPG Game & Landing Page (Python, PyGame, JS, Bootstrap)**

Developed a custom 2D RPG engine utilizing OOP principles and state management, complemented by a responsive landing page to showcase game mechanics.

- **Bitcoin Price Prediction & Data Apps**

Built ML regression models with interactive Plotly dashboards, and engineered multiple dynamic web applications powered by external REST APIs (OpenWeatherMap, OMDb).

EDUCATION & CERTIFICATIONS

- **Generative AI Specialist (Prompt Engineering, Vibe Coding, GEO)** – Gerilla Mentor (2026)
- **Advanced Python, 100 Days of Code, Version Control** – Udemy / Gerilla Mentor (2024-2025)

- **Cloud & Cybersecurity Basics** – Microsoft / Gerilla Mentor (2026)
- **The Complete Web Development Bootcamp** – Udemy (2026)
- **Introduction to Cybersecurity** – Cisco Networking Academy (2026)
- **JavaScript Algorithms & Data Structures** – freeCodeCamp (2025)
- **Complete Front-End Developer Course & Fundamentals** – Udemy / Gerilla Mentor (2025)
